C. WHAT ARE THE INVESTMENT STRATEGIES?

The fund manager will follow an active management style. The Scheme will focus on creating an appropriate diversified portfolio of companies with a long term perspective. The Scheme will follow a top down approach to select sectors and follow a bottom up approach to pick stocks across the sectors based on the growth and value opportunities available across sectors and stocks.

The Scheme by utilizing a holistic risk management strategy will endeavour to manage risks associated with investing in equity markets. The Scheme has identified the following risks and designed risk management strategies, which are embedded in the investment process to manage these risks:

a. Quality risk – Risk of investing in unsustainable/weak companies
b. Price risk - Risk of overpaying for a company
c. Liquidity risk- High impact cost of entry and exit

d. Volatility risk –Volatility in price due to company or portfolio specific factors
e. Event risk - Price risk due to a company/sector specific or market event

Portfolio Turnover:

The Scheme is an open-ended equity linked savings scheme. It is expected that there would be a number of subscriptions and redemptions on a daily basis. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. The fund manager will endeavor to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with reasonable accuracy, the likely turnover in the portfolio of the Scheme. The Scheme has no specific target relating to portfolio turnover.

Risk Control:

Risk is an inherent part of the investment function. Effective Risk Management is critical to Fund Management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of the Regulations.

The AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools. Further, the AMC has implemented a robust Front Office System (FOS) for managing risk related to investment restrictions. The system has inbuilt feature which enables the Fund Manager calculate various risk ratios and analyze the same.

The AMC has experienced investment professionals to help limit investment universe to carefully selected high quality businesses. The Fund Manager would also consider hedging the portfolios in case of predictable events with uncertain outcomes.

The Scheme would invest in a diversified portfolio of equity and equity related securities which would help alleviate the credit, sector/market capitalization related concentration risk.

The system enables identifying & measuring the risk through various risk measurement tools like various risk ratios, average duration and analyzes the same and acts in a preventive manner.

D. HOW WILL THE SCHEME BENCHMARK ITS PERFORMANCE?

Benchmark (Total Returns Index): The Scheme performance would be benchmarked against the Nifty 500 TRI (First Tier Benchmark).

The Trustee may change the benchmark in future if a benchmark better suited to the investment objective of the Scheme is available.

Justification of Benchmark

The Nifty 500 TRI is a well-diversified index and is consistent with the investment objective and strategy of the Scheme. It also covers majority of the sectors where the portfolio might be constructed by the fund manager.

The Trustee reserves the right to change the benchmark for the evaluation of the performance of the Scheme from time to time, keeping in mind the investment objective of the Scheme and the appropriateness of the benchmark, subject to the Regulations and other prevalent guidelines.

The AMC shall also conduct a quarterly review to ensure compliance with the requirement of investment of minimum amount in the Scheme which may change either due to change in value of the AUM or in the risk value assigned to the Scheme. Further, based on review of quarterly average AUM, shortfall in value of the investment in Scheme, if any, shall be made good within 7 days of such review. Such details of investment shall be disclosed on the website of the AMC and AMFI.

Part III. OTHER DETAILS

A. COMPUTATION OF NAV

The Net Asset Value (NAV) per unit of the Scheme for each option will be computed by dividing the net assets of the Scheme by the number of units outstanding on the valuation day. The Mutual Fund will value its investments according to the valuation norms, as specified in Eighth Schedule of the SEBI (MF) Regulations, or such norms as may be specified by SEBI from time to time.

The NAV of the Units under the Scheme will be calculated on a daily basis as shown below:

$$\text{NAV per unit (Rs.)} = \frac{\text{(Market / Fair Value of Scheme's Investments + Current Assets including Accrued Income - Current Liabilities and Provisions)}}{\text{No. of units outstanding under the Scheme / Option on the valuation day}}$$

The NAV shall be calculated/ rounded off up to four decimal places. However, the AMC reserves the right to declare the NAVs up to additional decimal places as it deems appropriate. Separate NAV will be calculated and disclosed for each Plan/Option. The NAVs of the Growth Option and the Income Distribution cum Capital Withdrawal/IDCW Option will be different after the declaration of the first IDCW. The AMC will calculate and disclose the NAV of the Scheme on all the Business Days.

Illustration on Computation of NAV for a Scheme has been provided below:

Particulars	Amount in Rs
Market or Fair Value of Scheme's investments	8,66,42,94,753.00
Current Assets including accrued income	15,00,000.00
Current Liabilities and Provisions	5,00,000.00

No. of Units outstanding under the Scheme = 33,81,85,338.724

The NAV per unit will be computed as follows:

$$\text{NAV per unit (Rs.)} = \frac{8,66,42,94,753.00 + 15,00,000.00 - 5,00,000.00}{33,81,85,338.724}$$

NAV per unit (Rs.) = 25.6229

Note: The aforesaid provisions pertaining to "Calculation of NAV" shall apply in respect of each individual Scheme and/or plan as the case may be. The NAV per unit above is rounded off to four decimals.

- **Methodology of calculating the sale price:**

The price or NAV a unitholder is charged while investing in an open-ended scheme is called sale / subscription price. Pursuant to Clause 10.4.1.(a) of SEBI Master Circular, no entry load will be charged by the Scheme to the unitholders.

Therefore, Sale / Subscription price = Applicable NAV

- **Methodology of calculating the repurchase price:**

Repurchase or redemption price is the price or NAV at which an open-ended scheme purchases or redeems its units from the Unitholders. It may include exit load, if applicable. The exit load, if any, shall be charged as a percentage of Net Assets Value (NAV) i.e. applicable load as a percentage of NAV will be deducted from the "Applicable NAV" to calculate the repurchase price.

Therefore, Repurchase / Redemption Price = Applicable NAV *(1 – Exit Load, if any)

For example, If the Applicable NAV of the Scheme is Rs. 10 and the Exit Load applicable at the time of investment is 2% if redeemed before completion of 1 year from the date of allotment of units and the Unitholder redeems units before completion of 1 year, then the repurchase/redemption price will be:

= Rs. 10*(1-0.02)
= Rs. 9.80

As per Regulation 49 (3) of the SEBI (MF) Regulations, while determining the price of the units, the mutual fund shall ensure that the repurchase price of an open ended scheme is not lower than 97 per cent of the Net Asset Value.

For other details such as policies w.r.t computation of NAV, rounding off, investment in Foreign Securities, procedure in case of delay in disclosure of NAV etc. refer to SAI.

B. NEW FUND OFFER (NFO) EXPENSES

These expenses are incurred for the purpose of various activities related to the NFO like sales and distribution fees, paid marketing and advertising, Registrar and Transfer Agent expenses, printing and stationary, bank charges etc.

In terms of Clause 10.1.16(a) of SEBI Master Circular, the AMC shall annually set apart at least 0.02% on daily net assets within the maximum limit of recurring expenses as per Regulation 52 for investor education and awareness initiatives.

The total expenses of the Scheme including the investment management and advisory fee shall not exceed the limits stated in Regulation 52(6) which are as follows:

(ii) On the next Rs.250 crores of the daily net assets – 2.00%;

SECTION II

I. INTRODUCTION

A. DEFINITIONS

For details refer https://www.mahindramanulife.com/downloads#MANDATORY-DISCLOSURES-+-Offer-Document-Related-Disclosures

B. RISK FACTORS

i. STANDARD RISK FACTORS

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down.
- Past performance of the Sponsors/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- The name of the Scheme does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The Sponsors is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1 lakh made by it towards setting up the Fund.
- The present scheme is not a guaranteed or assured return scheme.

ii. SCHEME SPECIFIC RISK FACTORS

Some of the specific risk factors related to the Scheme include, but are not limited to the following:

By virtue of requirements under the ELSS Guidelines, Units issued under the Scheme will not be redeemed until the expiry of 3 (three) years from the date of their allotment. The ability of an investor to realise returns on investments in the Scheme is consequently restricted for the first three years. Redemption will be made prior to the expiry of the aforesaid 3 (three) years period only in the event of the death of a Unit Holder, subject to the Units having been held for a period of 1 (one) year from the date of their allotment.

Risks associated with investments in Equities

- Equity and equity related securities may be volatile and hence are prone to price fluctuations on a daily basis. The liquidity of investments made in the Scheme may be restricted due to trading volumes and settlement periods. Settlement periods may get extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases, due to settlement problems, could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme portfolio or it may result into actual loss in terms of impact cost, should there be a subsequent decline in the value of securities held in the Scheme portfolio. Also, the value of the Scheme investments may be affected by interest rates, currency exchange rates, changes in law / policies of the government, taxation laws and political, economic or other developments which may have an adverse bearing on individual securities, a specific sector or all sectors.
- Investments in equity and equity related securities involve a degree of risk and investors should not invest in the equity Schemes unless they are prepared to take the risk of losing their investment.
- Securities which are not quoted on the stock exchanges are inherently less liquid in nature and carry a larger liquidity risk in comparison with securities that are listed on the exchanges or

offer other exit options to investors, including put options. The AMC may choose to invest in unlisted securities within the regulatory limit. The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected negatively if they are required to be sold prior to their target date of divestment. The price of unlisted security may go down before the divestment date and selling these securities before the divestment date may lead to losses in the portfolio.

Risks associated with investments in Fixed Income Securities

- **Interest-Rate Risk**: Fixed income securities such as government bonds, corporate bonds, and money market instruments and fixed income derivatives run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.
- **Re-investment Risk:** Investments in fixed income securities carry re-investment risk as interest rates prevailing on the coupon payment or maturity dates may differ from the original coupon of the bond.
- **Basis Risk**: Basis risk arises due to an unidentical price movement of the derivative vis-à-vis that of the security being hedged.
- **Spread Risk:** In a floating rate security the coupon is expressed in terms of a spread or mark up over the benchmark rate. In the life of the security this spread may move adversely leading to loss in value of the portfolio. The yield of the underlying benchmark might not change, but the spread of the security over the underlying benchmark might increase leading to loss in value of the security.
- **Liquidity Risk:** The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.
- **Credit Risk:** This is the risk associated with the issuer of a debenture/bond or a money market instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is considered to be the safest. Corporate bonds carry a higher amount of credit risk than Government securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.
- **Liquidity Risk on account of unlisted securities:** The liquidity and valuation of the Scheme investments due to their holdings of unlisted securities may be affected if they are required to be sold prior to their target date of divestment. The unlisted security can go down in value before the divestment date and selling of these securities before the divestment date can lead to losses in the portfolio.
- **Counterparty Risk: -** This is the risk of failure of counterparty to a transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of a counterparty default.
- **Settlement Risk:** Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.
- **Risks associated with unrated instruments:** - Investments in unrated instruments are subject to the risk associated with investments in any other fixed income securities, as referred above. However, investments in unrated instruments are considered to be subject to greater risk of loss of principal and interest than rated instruments.

Risks associated with 'Right to limit redemptions

Subject to the approval of Board of Directors of the AMC and Trustee Company and immediate intimation to SEBI, a restriction on redemptions may be imposed by the Scheme under certain exceptional circumstances, which the AMC / Trustee believe that may lead to a systemic crisis or event that constrict liquidity of most securities or the efficient functioning of markets. Please refer to the paragraph "Right to Limit Redemptions" for further details including the procedure to be followed while imposing restriction on redemptions.

Risks Factors associated with transaction in Units through stock exchange(s)

In respect of transaction in Units of the Scheme through BSE and / or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing / settlement by BSE and / or NSE and their respective clearing corporations on which the Fund has no control.

C. RISK MITIGATION STRATEGIES

Risk is an inherent part of the investment function. The AMC has incorporated adequate safeguards to manage risk in the fund management process. The risk control process involves identifying & measuring the risk through various Risk Measurement Tools.

Below are the indicative risk mitigation measures:

Nature of Risk	Risk mitigation measures
Risks associated with Equity investments	
Concentration Risk	The Scheme shall aim to mitigate this risk by investing across optimally large number of companies/sectors and endeavor to keep stock-specific concentration risk low. There is a process in place for regular monitoring of concentration.
Market Risk	The Scheme will try to reduce the market risk by undertaking active portfolio management as per the investment objective. The Scheme may also use derivatives to limit this risk. The Scheme shall aim to mitigate the unsystematic risk in the portfolio through adequate diversification.
Liquidity Risk	Liquidity Risk shall be addressed by monitoring the asset side secondary market liquidity in conjunction with the concentration and the profile of the liability side on timely basis. The analysis is conducted under both normal and stressed scenarios to capture the impact of unforeseen redemptions along with shallow secondary market liquidity. The portfolio construction and management shall be executed in line with the Regulatory and internal guidelines for liquidity risk management. Firmwide liquidity is also monitored on timely basis along with special focus on exposure to apparently less liquid securities in the scheme portfolios.

Risks associated with Debt Securities and Money Market Securities	
Market Risk / Interest Rate Risk	In expectation of a rising interest rate scenario, the Scheme may increase its investment in money market securities whereas if the interest rates are expected to fall the allocation to debt securities with longer maturity may be increased thereby mitigating risk to that extent. The funds' duration could be actively managed, taking into account the investment strategy, applicable regulations, scheme objectives, and prevailing market and interest rate conditions.

Liquidity Risk	Liquidity Risk shall be addressed by monitoring the asset side secondary market liquidity in conjunction with the concentration and the profile of the liability side on timely basis. The liquidity risk will be managed and/or sought to be addressed by creating a portfolio which has adequate access to liquidity in the secondary market. The portfolio construction and management shall be executed in line with the Regulatory and internal guidelines for liquidity risk management. Creating portfolios that are diversified across maturities, ratings, types of assets, etc. in accordance with the fund objectives, regulations, and investing strategy could be a way to decrease liquidity risk.
Credit Risk	In addition to external ratings by the accredited credit rating agencies, the credit analyst will undertake independent credit assessment that would capture the quantitative (financial statements) and qualitative aspects (accounting policies, management quality, off-balance sheet exposures, notes, auditors' comments disclosure standards etc.) of a company to assess its fundamental credit strength and guide the investment decisions in the schemes. There is also a regulatory cap based on issuer ratings on exposure to each issuer to ensure a diversified portfolio and reduced credit risk in the portfolio. Further, there are firm wide issuer limits to keep credit risk under control through diversification.
Re-investment Risk	Reinvestment risk on intermittent cashflows received by the Scheme manifests during a falling interest rate scenario. While the Scheme would be subjected to reinvestment risk, it is also expected to benefit from the capital appreciation in fixed income instruments driven by falling interest rates. Reinvestment risk and interest rate risk for fixed income securities mitigate each other.

II. INFORMATION ABOUT THE SCHEME:

A. WHERE WILL THE SCHEME INVEST?

Subject to the Regulations, the corpus of the Scheme can be invested in any (but not exclusively) of the following securities as permitted by SEBI/ RBI from time to time:

I) Equity and Equity Related Securities:

The corpus of the Scheme shall be predominantly invested in Equity and Equity related Securities as may be permitted under the Regulations and the ELSS Guidelines from time to time.

Such unexpected events could also be related to political, economic, military, monetary or other emergencies. 3. Operational issues – when exceptional circumstances are caused by force majeure, unpredictable operational problems and technical failures (e.g. a black out).
